ORIGINAL MANUAL - ENGLISH VERSION ONLY

When using an electrical appliance, basic precautions should always be followed, including the following:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Obey the following warnings:

Read and understand all warnings on this machine.

Carefully read and understand the Assembly instructions.

DANGER

Carefully read and understand the Assembly instructions. Read and understand the complete Manual. Keep the Manual for future reference.

DANGER

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug this machine from the electrical outlet immediately after using and before cleaning.

WARNING

To decrease the risk of burns, electric shock, or injury to persons, read and understand the complete Owner's Manual. Failure to follow these guidelines can cause a serious or possibly fatal electrical shock or other serious injury.

- Keep bystanders and children away from the product you are assembling at all times.
- Do not connect power supply to the machine until instructed to do so.
- The machine should never be left unattended when plugged in. Unplug from outlet when not in use and before cleaning, maintaining or repairing the machine.
- Before each use, examine the machine for damage to power cord, loose parts or signs of wear. Do not use if found in this condition. Contact your local distributor for repair information.
- Not intended for use by persons with medical conditions where those conditions may impact the safe operation of the machine or pose a risk of injury to the user.
- Do not drop or put objects into any opening of the machine.
- Never operate this machine with the air openings blocked. Keep the air openings free of lint, hair and the like.
- Do not assemble this machine outdoors or in a wet or moist location.
- Make sure assembly is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts. Do not do steps that involve heavy lifting or awkward movements on your own.
- Set up this machine on a solid, level, horizontal surface.
- Do not try to change the design or functionality of this machine. This could compromise the safety of this machine and will void the warranty.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and void the warranty.
- Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Manual.
- Read and understand the complete Manual supplied with this machine before first use. Keep the Manual for future reference.
- Do all assembly steps in the sequence given. Incorrect assembly can lead to injury or incorrect function.
- SAVE THESE INSTRUCTIONS.

Before using this equipment, obey the following warnings:

Read and understand the complete Manual. Keep the Manual for future reference.

Read and understand all warnings on this machine. If at any time the Warning stickers become loose, unreadable or dislodged, contact your local distributor for replacement stickers.

DANGER

To reduce the risk of electrical shock or usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

- Children must not be let on or near to this machine. Moving parts and other features of the machine can be dangerous to children.
- Not intended for use by anyone under 14 years of age.
- Consult a physician before you start an exercise program or a new health and diet plan. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine's computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.
- Before each use, examine this machine for loose parts or signs of wear. Do not use if found in this condition. Monitor the Pedals and Crank Arms closely. Contact your local distributor for repair information.
- Maximum user weight limit: 136 kg (300 lbs.). Do not use if you are over this weight.
- This machine is for home use only.
- Do not wear loose clothing or jewelry. This machine contains moving parts. Do not put fingers or other objects into moving parts of the exercise equipment.
- Set up and operate this machine on a solid, level, horizontal surface.
- Make the Pedals stable before you step on them. Use caution when you step on and off the machine.
- Do not operate this machine outdoors or in moist or wet locations.
- Keep at least 0.6 m (24") on each side of the machine clear. This is the recommended safe distance for access and passage around and emergency dismounts from the machine. Keep third parties out of this space when machine is in use.
- Do not over exert yourself during exercise. Operate the machine in the manner described in this manual.
- Perform all regular and periodic maintenance procedures recommended in the Owner's Manual.
- Keep the Pedals and Handlebars clean and dry.
- Exercise on this machine requires coordination and balance. Be sure to anticipate that changes in speed and resistance level can occur during workouts, and be attentive in order to avoid loss of balance and possible injury.
- This machine cannot stop the Pedals or Upper Handlebars independently of the Resistance Fan. Reduce the pace to slow the Resistance Fan, Upper Handlebars and Pedals to a stop. Do not dismount the machine until the Pedals and Upper Handlebars have come to a complete stop.
- Do not drop or put objects into any opening of the machine.
- Prior to use read and understand the Owner's Manual. The appliance is not to be used by persons with functional limitations and impairments, reduced physical, sensory or mental capabilities, or lack of experience and knowledge.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- Children should be supervised to ensure that they do not play with the appliance.

Specifications / Before Assembly

Maximum User Weight: 136 kg (300 lbs.)

Total Surface Area (footprint) of equipment: 7429.5 cm²

Maximum Pedal Height: 48.5 cm (19.1 inches)

Machine Weight: 64.7 kg (142.7 lbs.)

Power Requirements:

Operational Voltage: 9VDC

Operating Current: 1.5A

AC Power Adapter: 220-240VAC, 50Hz

Heart Rate Chest Strap: 1 CR2032 battery

Complies with the following:

ISO 20957 Compliant

SAA Compliant

DO NOT dispose of this product as refuse. This product is to be recycled. For proper disposal of this product, please follow the prescribed methods at an approved waste center.

Before Assembly

Select the area where you are going to set up and operate your machine. For safe operation, the location must be on a hard, level surface. Allow a workout area of a minimum 189.2 cm x 246.4 cm (74.5"x 97"). Be sure that the workout space you are utilizing has adequate height clearance, taking into consideration the height of the user and the maximum pedal height of the fitness machine.

Basic Assembly Tips

Follow these basic points when you assemble your machine:

- Read and understand the "Important Safety Instructions" before assembly.
- Collect all the pieces necessary for each assembly step.
- Using the recommended wrenches, turn the bolts and nuts to the right (clockwise) to tighten, and the left (counterclockwise) to loosen, unless instructed otherwise.
- When attaching 2 pieces, lightly lift and look through the bolt holes to help insert the bolt through the holes.
- The assembly requires 2 people.

Machine Mat

The Bowflex Max Trainer™ Machine Mat is an optional accessory that helps keep your workout area clear and adds a layer of protection to your floor. The rubber machine mat provides a non-slip, rubber surface which limits static discharge and reduces the possibility of display or running errors. If possible, put your Bowflex Max Trainer™ Machine Mat in your selected workout area before you begin assembly.

To order the optional machine mat, contact your local distributor.

H	10	Socket Head Hex Screw, M6x1.0x20			

Note: Select pieces of Hardware have been provided as spares on the Hardware Card. Be aware that there may be remaining Hardware after the proper assembly of your machine.

Tools

Included

1. Attach Rail Assembly to Frame and then Release the Frame from the Shipping Plate

! Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts. Do not do steps that involve heavy lifting or awkward movements on your own.

NOTICE: Hand tighten hardware.

2. Carefully Lift the Frame Assembly from the Shipping Plate and Attach to the Stabilizer Assembly

! Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts. Do not do steps that involve heavy lifting or awkward movements on your own. Lift the Frame Assembly from the exterior of the pivot assembly as indicated below.

NOTICE: Once all hardware has been hand tightened, fully tighten ALL hardware from previous steps.

3. Attach Rear Shroud and Caps to the Frame Assembly

NOTICE: Place the inside hook of the Rear Shroud on the Frame Assembly and then pivot it up into place.

4. Attach Legs to Frame Assembly

Be aware that the Legs are connected and when either of these parts move the other does as well.

5. Attach Pedals to Frame Assembly

! In order to avoid possible serious injury, when inserting the tube ends into the Leg Assemblies be careful to avoid fingers or hands being caught or pinched.

6. Connect the Foot Pads and then the Foot Pad Inserts

7. Attach the Upper Handlebars to Frame Assembly

! Be aware that the Pedals and the Upper Handlebars are connected and when either of these parts move the other does as well. Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts. Do not do steps that involve heavy lifting or awkward movements on your own.

NOTICE: Be sure to attach the Upper Handlebars so that they are in the range of operation for the User.

8. Connect the Static Handlebar Assembly to Frame Assembly

NOTICE: Do not crimp the Console Cable.

9. Connect the AC Adapter to the Frame Assembly

NOTICE: Be sure to use the appropriate AC Adapter plug for your region.

10. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled. Be sure to record the serial number in the field provided at the front of this manual.

! Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.

Adjustments

Moving the Machine

⚠ The machine may be moved by one or more persons depending on their physical abilities and capacities. Make sure that you and others are all physically fit and able to move the machine safely.

1. Grasp the inner, unmoving part of the Pivot Assembly to carefully tilt the machine toward you onto the transport rollers.

⚠ Be aware of the Handlebars and the weight of the machine before tilting the machine.

2. Push the machine into position.
3. Carefully lower the machine into position.

NOTICE: Be careful when you move the machine. All abrupt motions can affect the computer operation.

Leveling the Machine

The machine needs to be leveled if your workout area is uneven or if the Rail Assembly is slightly off the floor. To adjust:

1. Place the machine in your workout area.
2. Loosen the locking nuts and adjust the levelers until they are evenly balanced in contact with the floor.

⚠ Do not adjust the levelers to such a height that they detach or unscrew from the machine. Injury to you or damage to the machine can occur.

3. Tighten the locking nuts.

⚠ Make sure the machine is level and stable before you exercise.

A	Console Button Assembly	I	Roller
B	Contact Heart Rate (CHR) Sensors	J	Rail Assembly

⚠ WARNING

Use the values calculated or measured by the machine's computer for reference purposes only. The heart rate displayed is an approximation and should be used for reference only. Over exercising may result in serious injury or death. If you feel faint stop exercising immediately.

Console Features

The Console provides information about your workout on the display screen.

Burn Rate Display

The Burn Rate Display shows the level of calories being burned per minute. This rate is a function of Intensity, which is the current level of RPM (pedal speed) and resistance level (1-16). As either of those values increase, the Burn Rate will increase.

Target Burn Rate LED Range

The Target Burn Rate LED Range is a workout coach based on the settings of the selected User Profile. A range of five LED's are activated during a workout. The first of the LEDs in the range is a suggested beginner level, with the higher LEDs being for a more advanced fitness user. The Intensity of the range is based on the Workout Profile Display.

Note: Be sure the User Profile is current for a more exact calorie burn rate and suggested target range.

The Target LED Range is a suggested workout level, and **should only be followed if your physical fitness level allows.**

During an Interval workout, the ACTIVE segment will be red LEDs, and the REST segment will be green LEDs.

Maximum Burn Rate LED Marker

The Maximum Burn Rate LED Marker is an orange LED that shows the highest rate of calorie burn achieved during the current workout.

Bluetooth® Synced Indicator Light

The Bluetooth® Synced Indicator Light shows when a device is paired with the App.

Calories

The Calories display field shows the estimated calories that have been burned during the workout. The maximum display is 9999.

LCD Display Data

The console display shows the workout measurements and current options.

Time

The TIME display field shows the time count for the active workout. There are three types of time display depending on the style of workout: Interval, Manual, or Standard.

ACTIVE: During an Interval workout, the TIME display will shift between the ACTIVE and REST intervals with an audible confirmation, counting the time down for the current segment. ACTIVE is the sprint, or high Intensity, segment of the Interval workout.

TOTAL: During a Manual workout, the TIME display will count up until the workout is ended. During a Standard workout, the total time of the workout will count down.

The maximum display is 99:99. If the time count is more, the workout will be ended.

REST: The reduced workout level during an Interval workout that counts down until the next ACTIVE segment.

Total Time

The TOTAL TIME display field shows the total time count only during an Interval workout. This display will be blank during a Manual or Standard workout.

The maximum display is 99:99. If the time count is more, the workout will be ended.

User Profile

The USER PROFILE display shows the selected user profile. A user profile is always selected.

Note: For more accurate calorie counts and target Calorie Burn Rates, customize your User Profile.

Workout Profile Display

The Workout Profile Display area shows the course profile of the program is either Burn Rate or Resistance Level. Each column in the profile shows one interval (workout segment). The higher the column, the higher the intensity of the workout.

During a Standard program, the profile shows the level of resistance (Level). The Console will adjust the Resistance Level during the workout.

During a SMART program, the profile shows the level of Burn Rate. The Console will adjust the resistance level to encourage a User reach the Targeted Burn Rate (based on the pedal speed).

The flashing column shows the current interval.

RPM

The RPM display field shows the machine revolutions per minute (pedal speed). The maximum display is 200.

Heart Rate

The Heart Rate display shows the heart rate in beats per minute (BPM) from the heart rate sensors. This value will not be shown if a heart rate signal is not detected.

 **Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. The heart rate displayed on the console is an approximation and should be used for reference only.**

Burn Rate

The Burn Rate display field shows the current rate at which calories are being burned per minute. The RPM and Resistance Level directly change this rate. The User Profile settings also affect the rate (User weight).

Level

The Level display field shows the current Resistance Level (1-16). The higher the Resistance Level, the harder it will be to push the Pedals.

During a Smart workout, the Console will adjust the resistance level to encourage a User to reach the Targeted Burn Rate (based on the pedal speed).

Keypad Functions

PROGRAMS button- Push to select a workout program, push and hold for 3 seconds to customize the selected workout.

MAX INTERVAL button- Push to start the MAX INTERVAL workout, push and hold for 3 seconds to edit the interval times (ACTIVE and REST) and Burn Rates for the MAX workout program.

USER button- Push to select the desired User Profile, push and hold for 3 seconds to edit the selected User Profile

Burn Rate Increase (▲) button- Increases the Target Burn Rate during a workout, or increases a value (time, age, weight, or height).

START/ENTER button- From the WELCOME screen starts a Manual workout, starts a selected Program workout, or resumes a paused workout.

Push to accept the displayed value for an option.

Resistance Level Increase (▲) button- Increases the resistance level of the workout.

Burn Rate Decrease (▼) button- Decreases the Target Burn Rate during a workout, or decreases a value (time, age, weight, or height).

PAUSE/END button- Pauses an active workout, ends a paused workout, or goes back to the previous screen.

Resistance Level Decrease (▼) button- Decreases the resistance level of the workout.

Connectivity on your Bowflex Max Trainer® cardio machine

The Bowflex Max Trainer® M5 cardio machine is equipped with Bluetooth® connectivity and can wirelessly sync with the “Bowflex Max Trainer® 2” Fitness App on supported devices.

Note: For a complete list of supported devices, visit www.bowflexmaxtrainer.com.

Fitness App (“Bowflex Max Trainer® 2”)

The Bowflex Max Trainer® 2 App syncs with your Bowflex Max Trainer® M5i to track total calories burned, time, watts, and more. Records and stores every workout for quick reference. Plus, it automatically syncs your workout data with MyFitnessPal® to make hitting your daily goals easier than ever! Track your results and share with friends and family.

1. Download the free software App, named “Bowflex Max Trainer® 2”. The software app is available on Google Play™ and App Store.

Note: For a complete list of supported devices, visit www.bowflexmaxtrainer.com.

2. Follow the instructions on the App to sync your device to the Bowflex Max Trainer® cardio machine.

The Console will activate the Bluetooth® synced indicator light when a Bluetooth® enabled device is synced.

Note: If the Bluetooth® synced indicator light is active and your Bluetooth® enabled device is not synced, the fitness machine may have synced to another Bluetooth® enabled device. Turn the power off to the machine, wait 5 minutes, and restart it with your smart device near the fitness machine.

Bluetooth® synced indicator light

If the synced indicator light does not activate and your smart device is enabled, de-activate and re-activate the Bluetooth® wireless feature on your smart device. Then click on the "Sync to Machine" button from within the App. When synced, the indicator light will activate.

Contact Heart Rate Sensors

Contact Heart Rate (CHR) sensors send your heart rate signals to the Console. The CHR sensors are the stainless steel parts of the Handlebars. To use, put your hands comfortably around the sensors. Be sure that your hands touch both the top and the bottom of the sensors. Hold firm, but not too tight or loose. Both hands must make contact with the sensors for the Console to detect a pulse. After the Console detects four stable pulse signals, your initial pulse rate will be shown.

Once the Console has your initial heart rate, do not move or shift your hands for 10 to 15 seconds. The Console will now validate the heart rate.

Many factors influence the ability of the sensors to detect your heart rate signal:

- Movement of the upper body muscles (including arms) produces an electrical signal (muscle artifact) that can interfere with pulse detection. Slight hand movement while in contact with the sensors can also produce interference.
- Calluses and hand lotion may act as an insulating layer to reduce the signal strength.
- Some Electrocardiogram (EKG) signals generated by individuals are not strong enough to be detected by the sensors.
- The proximity of other electronic machines can generate interference.

Remote Heart Rate Monitor

Monitoring your Heart Rate is one of the best procedures to control the intensity of your exercise. Contact Heart Rate (CHR) sensors are installed to send your heart rate signals to the Console. The Console can also read telemetry HR signals from a Heart Rate Chest Strap Transmitter that operates in the 4.5kHz - 5.5kHz range.

Note: The heart rate chest strap must be an uncoded heart rate strap from Polar Electro or an uncoded POLAR® compatible model. (Coded POLAR® heart rate straps such as POLAR® OwnCode® chest straps will not work with this equipment.)

 **If you have a pacemaker or other implanted electronic device, consult your doctor before using a wireless chest strap or other telemetric heart rate monitor.**

The heart rate displayed on the console is an approximation and should be used for reference only.

Chest Strap

Using the heart rate transmitter chest strap lets you monitor your heart rate at any time during your workout.

 **Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine's computer for reference purposes only.**

To put on your chest strap:

1. Adjust the strap length to fit snugly and comfortably against your skin. Secure the strap around your chest, just below the chest muscles, and buckle it.
2. Lift the transmitter off your chest and moisten the two Grooved Electrode Areas on the back.
3. Check that the wet electrode areas are firmly against your skin.

The transmitter will send your heart rate to the machine's receiver and display your estimated Beats Per Minute (BPM).

Always remove the transmitter before you clean the chest strap. Clean the chest strap regularly with mild soap and water, and thoroughly dry it. Residual sweat and moisture may keep the transmitter active and drain the battery in the transmitter. Dry and wipe clean the transmitter after each use.

Note: Do not use abrasives or chemicals such as steel wool or alcohol when you clean the chest strap, as they can damage the electrodes permanently.

If the Console does not display a heart rate value, the transmitter may be at fault. Check that the textured contact areas on the chest strap are making contact with your skin. You may need to lightly wet the contact areas. If no signal appears or you need further assistance, contact your local distributor.

 **Before discarding a chest strap, remove the battery. Dispose of in accordance with local regulations and/or at approved recycling centers.**

Heart Rate Calculations

Your maximum heart rate usually decreases from 220 Beats Per Minute (BPM) in childhood to approximately 160 BPM by age 60. This fall in heart rate is usually linear, decreasing by approximately one BPM for each year. There is no indication that training influences the decrease in maximum heart rate. Individuals of the same age could have different maximum heart rates. It is more accurate to find this value by completing a stress test than by using an age related formula.

Your at-rest heart rate is influenced by endurance training. The typical adult has an at-rest heart rate of approximately 72 BPM, whereas highly trained runners may have readings of 40 BPM or lower.

The Heart Rate table is an estimate of what Heart Rate Zone (HRZ) is effective to burn fat and improve your cardiovascular system. Physical conditions vary, therefore your individual HRZ could be several beats higher or lower than what is shown.

The most efficient procedure to burn fat during exercise is to start at a slow pace and gradually increase your intensity until your heart rate reaches between 60 – 85% of your maximum heart rate. Continue at that pace, keeping your heart rate in that target zone for over 20 minutes. The longer you maintain your target heart rate, the more fat your body will burn.

The graph is a brief guideline, describing the generally suggested target heart rates based on age. As noted above, your optimal target rate may be higher or lower. Consult your physician for your individual target heart rate zone.

Note: As with all exercises and fitness regimens, always use your best judgment when you increase your exercise time or intensity.

Fitness Basics

Frequency

To maintain good health, lose weight and improve your cardiovascular endurance, use the Bowflex Max Trainer® cardio machine a minimum of 3 times per week, around 14 minutes each day.

If you are new to exercise (or returning to a regular exercise program), and you are unable to comfortably complete 14 minutes of continuous exercise at one time, just do 5 – 10 minutes, and gradually increase your workout time until you can reach a 14 minute total.

If your schedule is busy, and you are unable to fit 14 minutes of continuous exercise into your day, try accumulating 14 minutes by doing multiple shorter workouts on the same day. For example, 7 minutes in the morning and 7 minutes in the evening. This may be a great way to start your cardio training if you are new to vigorous activity.

For best results, combine your Bowflex Max Trainer® cardio machine workouts with a strength training program using a Bowflex® home gym or Bowflex® SelectTech® dumbbells, and follow the Bowflex™ Body Weight Loss Guide included in this manual.

Consistency

Busy work schedules, family obligations and daily chores can make it difficult to fit regular exercise into your life. Try these tips to increase your chances of success:

Schedule your workouts the same way you schedule meetings or appointments. Select specific days and times each week, and try not to change your workout times.

Make a commitment to a family member, friend or spouse, and encourage each other to stay on track each week. Leave messages with friendly reminders to be consistent, and keep each other accountable.

Make your workouts more interesting by alternating between steady state (single-speed) workouts and interval training (varied speed) workouts. The Bowflex Max Trainer® cardio machine is even more fun when you add this kind of variety.

Apparel

It is important to wear appropriate, safe and comfortable footwear and clothing when using the Bowflex Max Trainer® cardio machine, including:

- Rubber-soled athletic walking or running shoes.
- Exercise clothing that allows you to move freely, and keep comfortably cool.
- Athletic support that provides stability and comfort.
- Exercise friendly water bottle for constant hydration.

Warm-Up*

Before you use your Bowflex Max Trainer® cardio machine, consider doing these dynamic warm-up stretches, which will help prepare your body for the workout:

Dynamic Knee Hug

Stand with the feet together. Bring one knee forward and up toward the chest. Place the hands around the shin and pull the knee into the chest. Release the stretch by putting the foot on the floor. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times. Repeat the stretch with the other leg.

Dynamic Knee Bend

Stand with the feet together. Hold onto a wall for balance with one hand, if necessary. Raise the heel of one foot toward the gluteals. Release the stretch by putting the foot on the floor. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times. Repeat the stretch with the other leg.

Dynamic Knee Kick

Stand tall and hold one leg up with the hands at hip height, keeping the knee bent. Hold onto a wall for balance with one hand, if necessary. Straighten the knee as far as comfortably possible. Release the stretch by bending the knee. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times. Repeat the stretch with the other leg.

Dynamic Twist

Stand with the feet shoulder-width apart. Bend the elbows; hold the arms out to the sides. Twist the upper body to one side and then the other side as far as comfortably possible. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times.

* Source: Jay Blahnik's Full-Body Flexibility, Second Edition, 2010. HumanKinetics.com.

Dynamic Bent Knee Heel Press

Stand with one foot forward and one foot back, hip-width apart and feet facing forward. Hold onto a wall for balance with one hand, if necessary. Bend both knees putting weight on the back heel. Release the stretch by returning to the start position. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times. Repeat the stretch with the other leg. Touch a wall or hold onto something for balance, if necessary.

Dynamic Side Reach

Stand with the feet apart, the knees slightly bent and the arms at the sides of the body. Reach with one hand above the head and lean over to the opposite side. Release the stretch by returning to the start position. Then reach with the other hand to the opposite side. Use the other arm to support the body weight on the thigh, if necessary. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times.

Workouts

Follow these guidelines to ease yourself into a weekly exercise regimen. Use your judgment and/or the advice of your physician or health care professional to find the intensity and level of your workouts.

 **Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine's computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.**

Steady State and Interval Training are 2 types of workouts you can do on your Bowflex Max Trainer® cardio machine:

Steady State workouts

A Steady State workout involves slowly increasing your workout speed to a challenging, but comfortable, speed you can hold for most of your workout. Getting your Heart Rate up into the Fat-Burning, Heart Zone zone for an entire workout would be a great Steady State workout. For example, holding a 6 calories per minute Burn Rate pace for the entire workout, except during the warm-up and cool-down. Steady State workouts help you build exercise confidence, stamina and endurance, and are essential to a well-rounded cardiovascular training program.

Interval Training workouts

An Interval Training workout involves adjusting your workout intensity for specific lengths of time to raise and lower your breathing rate, heart rate and calorie burn. This form of workout allows you to burn more calories than a standard workout in a shorter period of time. Using the Calorie Burn Rate display, you can adjust the intensity of your workout quickly to achieve your goals.

The Bowflex Max Trainer® cardio machine combines 8 “ACTIVE” and 8 “REST” segments to create an Interval workout. During an “ACTIVE” segment, push yourself to a level of high calorie burn that can be repeated for the 8 segments. Then during the “REST” segments, allow yourself to decrease the intensity and prepare for the next “ACTIVE” segment. These extreme changes in intensity, along with pushing your body toward exhaustion, is where the maximum benefits are gained from Interval Training workouts.

Interval Training workouts provide variety, help minimize overuse injuries (that sometimes occur from doing only Steady State workouts), maximize calorie burn and improve fitness.

The Bowflex Max Trainer® cardio machine is designed to cushion your joints and muscles, and both Steady State and Interval Training workouts should feel much more comfortable than walking or running outside on a hard surface or a treadmill.

After Burn Rate

At the end of an intense Interval Training workout, your body will actually need to expend additional energy to replenish your body's reserves. This additional amount of energy that your body will be using is the After Burn Rate, or EPOC (Excess Post-exercise Oxygen Consumption). The level of this additional energy requirement for your body is directly related to many factors. Some factors are your physical fitness level, intensity level of the interval training workout, length of oxygen deprivation during the workout, and physical demands during the recovery phase.

In summary, your body may be burning more calories after your workout. So after an intense MAX Interval workout, you may feel the effects for hours afterwards.

Workout Log

Use this log to track your workouts and progress. Tracking your workouts helps you stay motivated and achieve your goals.

[illegible]

Cool-Down *

When you are done using your cardio machine, consider doing these relaxing stretches, which will help your body recover from the workout and make you more flexible:

Lying Leg Raise

Lie on the floor face up with the legs slightly bent. Lift one leg up toward the ceiling, keeping the knee straight. Place the hands (or a strap) around the thigh and move the leg closer to the head. Hold the stretch for 10 to 30 seconds. Repeat the stretch on the other leg. Keep the head on the floor and do not round the spine.

Side Lying Knee Bend

Lie on the floor on one side of the body and rest the head on the lower arm. Bend the top knee and hold the ankle with the same-side hand, then pull the heel toward the gluteals. Hold the stretch for 10 to 30 seconds. Lie on the other side and repeat the stretch with the other leg. Remember to hold the knees close together.

Lying Figure Four

Lie on the floor face up with the legs bent. Place one foot across the thigh of the opposite leg in the figure four position. Reach for the leg on the floor and pull it toward the chest. Hold the stretch for 10 to 30 seconds. Repeat the stretch with the other leg. Keep the head on the floor.

Seated Twist

Sit on the floor and extend the legs straight out in front of the body with the knees slightly bent. Place one hand on the floor behind the body and the other hand across the thigh. Twist the upper body as far as comfortably possible to one side. Hold the stretch for 10 to 30 seconds. Repeat the stretch on the other side.

Seated Figure Four

Sit on the floor and extend one leg straight out in front of the body. Place the foot of the other leg across the thigh in the figure four position. Move the chest toward the legs, pivoting at the hip. Hold the stretch for 10 to 30 seconds. Repeat on the other leg. Use the arms to support the back.

Dynamic Heel Drop

Place the ball of one foot on the edge of a step or staircase. Place the other foot slightly in front. Hold onto a wall for balance with one hand, if necessary. Lower the heel of the back foot as far as comfortably possible, keeping the knee straight. Release the stretch by lifting the heel as high as comfortably possible. Each repetition of the sequence should take 1 to 3 seconds. Repeat as a continuous, controlled, fluid sequence 10 or 20 times. Repeat the stretch with the other leg.

How Often Should You Exercise

 Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine's computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.

- 3 times a week for about 15 minutes each day.
- Schedule workouts in advance and try to follow the schedule.

Note: If you are new to exercise (or returning to a regular exercise program), and you are unable to comfortably complete 15 minutes of continuous exercise at one time, just do 5 – 10 minutes, and gradually increase your workout time until you can reach a 15 minute total.

Intensity of Workout

To increase the intensity of your workout:

- Push yourself to increase the number of Pedal revolutions per minute
- Place your feet further out toward the rear of the Pedals
- Increase the Intensity Level and keep your RPM consistent, or increase it as well
- Use your upper and lower body at different levels
- Shift your grip location on the Upper Handlebars to work out other parts of your upper body

Hand Placement (Grip Selection)

The fitness machine is equipped with Upper Handlebars that allow for a variety of upper body workouts. When starting out, place your hands where it feels most comfortable and stable on the Upper Handlebars. As you progress on your fitness routine, shift your hand placement to target different muscle groups.

 Exercise on this machine requires coordination and balance. Be sure to anticipate that changes in speed and resistance level can occur during workouts, and be attentive in order to avoid loss of balance and possible injury.

The Static Handlebars can also be used to add stability and allow you to focus the workout more on your legs.

Mounting and Dismounting Your Machine

 Care should be used when mounting or dismounting the machine.

Be aware that the Pedals and the Handlebars are connected and when either of these parts move the other does as well. In order to avoid possible serious injury, grasp the Static Handlebars to steady yourself.

Be sure there is nothing under the Pedals or in the Air Resistance Fan before moving anything on the machine.

To mount your fitness machine:

1. Move the Pedals until the one nearest to you is in the lowest position.
2. Grasp the Static Handlebars under the Console Button Assembly.
3. Steadying yourself with the Static Handlebars, step up onto the lowest Pedal and place your other foot onto the opposite Pedal.

Note: "Bottomed out" is when the User is unable to start a workout because the Pedals will not move. If this occurs, safely grasp the Static Handlebars and apply your weight to the heel of the higher foot. While still grasping the Static Handlebar, lean back slightly applying more weight onto the heel. Once the Pedals begin to move, resume your intended workout.

To dismount your fitness machine:

1. Move the Pedal you want to dismount from to the highest position, and bring the machine to a complete stop.

This machine is not equipped with a free-wheel. Pedal speed should be reduced in a controlled manner.

2. Grasp the Static Handlebars under the Console to steady yourself.
3. With your weight on the lowest foot, swing the upper foot off the machine and down onto the floor.
4. Step off of the machine and release your grip from the Static Handlebars.

Getting Started

1. Place the fitness machine in your workout area.

Place the machine on a clean, hard, level surface, free from unwanted material or other objects that may hamper your ability to move freely. A rubber mat can be used below the machine to prevent the release of static electricity and protect your flooring.

The machine can be moved by one or more persons. Make sure that your own physical strength is capable of safely moving the machine.

2. Examine for any objects below the Pedals and in the Air Resistance Fan. Be sure it is clear.
3. Connect the power cord to the machine and into a grounded AC Wall Outlet.
4. If you use the Heart Rate Monitor, follow the Chest Strap directions.
5. To mount the machine, move the Pedals until the one nearest you is in the lowest position.

Care should be used when mounting or dismounting the machine.

Be aware that the Pedals and the Handlebars are connected and when either of these parts move the other does as well. In order to avoid possible serious injury, grasp the Static Handlebars to steady yourself.

6. Grasp the Static Handlebars under the Console Button Assembly.
7. Steadying yourself with the Static Handlebars, step up onto the lowest Pedal and place your other foot onto the opposite Pedal.

Note: "Bottomed out" is when the User is unable to start a workout because the Pedals will not move. If this occurs, safely grasp the Static Handlebars and apply your weight to the heel of the higher foot. While still grasping the Static Handlebar, lean back slightly applying more weight onto the heel. Once the Pedals begin to move, resume your intended workout.

8. Push the USER button to select the desired User Profile.
9. Push the START button to begin a Quick Start workout. Starting with a Quick Start workout will get you familiar with how your Bowflex Max Trainer® machine operates and responds to adjustments of Resistance Level and Burn Rate.

Note: When operating the Bowflex Max Trainer® machine, be sure the Legs are moving in the direction as shown on the Crank Cover.

When ready for a Bowflex Max Trainer® workout, be sure to program your User Profile (see the Edit a User Profile section) before starting the MAX workout. The suggested Target Burn Rates are based on your User Profile settings.

Power-Up / Idle Mode (WELCOME screen)

The Console will enter Power-Up / Idle Mode if it is plugged into a power source, any button is pushed, or if it receives a signal from the RPM sensor as a result of pedaling the machine.

Auto Shut-Off (Sleep Mode)

If the Console does not receive any input in approximately 5 minutes, it will automatically shut off. The LCD display is off while in Sleep Mode.

Note: The Console does not have an On/Off switch.

The Manual workout program is an open-ended workout that tracks your total time, allowing you total control. The Workout Profile Display shows the Target Burn Rate for the Manual program.

- Note: During the workout, the Console will show the Target LED Range based on the selected User Profile settings.

The MAX Interval Workout Program is a workout that alternates from intense bursts of output ("ACTIVE"), to a slower paced, 'catch your breath' time period ("REST"), both of which are repeated over eight cycles. The Workout Profile Display shows the Target Burn Rate for the MAX Interval program.

- Note:** During the workout, the Console will show the Target LED Range based on the selected User Profile settings.

- Note: The Workout Profile Display will adjust the Burn Rate profile to the current User settings.

- The first workout segment is an “ACTIVE” interval that lasts for a shorter period of time. Safely push yourself to get the Burn Rate display into the Target Burn Rate (red LED's) and keep it in the range until the time reaches 00:00.

Note: The Target Burn Rate (LED) Range is provided only as a suggested target. The 5 LED range provides a lesser target, and allows a User to progress to the higher LED's in the range as their fitness level increases. To change the Target Burn Rate (LED) Range, push the appropriate Burn Rate button until the Target Range is near the desired value.

At the last 3 seconds of the “ACTIVE” workout, the Console will begin an audible countdown.

- The Target LED Range will shift from red to green and sweep to a reduced Burn Rate. During the REST Interval, continue to work out but at a lower Intensity.

At the last 3 seconds of the “REST” workout, the Console will begin an audible countdown. The interval is about to shift from a “REST” to an “ACTIVE” interval again.

- The shift from “ACTIVE” to “REST” segments will repeat for a total of 8 cycles over the workout.

- Note: If an Interval workout is ended before all 16 segments have been completed, the Console will only show the last segment completed on the Program Profile.

Workout Programs

The Workout Programs are organized into two different styles of Workouts: Standard Workouts and SMART Workouts.

STANDARD WORKOUTS

Calorie Burn

Stairs

Fat Burn

Standard Workouts show the course profile of Resistance Levels for the program. Each column in the profile shows one workout segment. The higher the column, the higher the resistance level. Each column of a Standard Workout is for 1 minute (16 minute workout).

The flashing column shows your current interval. The Console will adjust the Resistance Level to the Workout Profile Display.

Note: If the Resistance Level is changed during a workout, the profile of the Workout Program will change.

SMART WORKOUT PROGRAMS

SMART Workouts show the course profile of Burn Rate for the program. Each column in the profile shows one workout segment. The higher the column, the higher the Burn Rate. The Console will adjust the resistance level to assist the User to reach the Target Burn Rate.

Note: The Workout Profile Display will adjust the Burn Rate profile to the current User settings.

Calorie Goal

The Calorie Goal workout is based on calories burned over a workout. The Console assigns a calorie value to each of the 16 segments based on the Burn Rate of each segment. During a workout, when the User has burned the assigned calorie value for the current segment, the workout shifts to the next segment. At the end of the workout, the 16 segments will have been completed and the total calories burned will match the calorie goal.

Note: If the Burn Rate is changed during a workout, the time of each remaining segment may adjust because of the new Burn Rate level.

Steady State

The Steady State workout program is an open-ended workout that tracks the total workout time. As RPM may fluctuate over a workout, the Console will adjust the Resistance Level to keep the User in the Target Burn Rate Range.

Note: Because of the open-ended design of the Steady State workout, it is only adjustable during a workout.

Fitness Test

The Fitness Test measures the improvements of your physical fitness level. The test compares your power output to your heart rate. As your fitness level improves, your power output will increase at a given heart rate.

Note: The Console must be able to read the heart rate information from the Contact Heart Rate (CHR) sensors or Heart Rate Monitor (HRM) to work correctly.

The Console will use the Age and Weight values for the selected User Profile to calculate the Fitness Score.

Start to work out and hold the Heart Rate Sensors. The workout starts with a Target Burn Rate that increases with each column. Safely keep your current Burn Rate in the Target Burn Rate Range, increasing your heart rate. The Target Burn Rate continues to increase automatically until your heart rate reaches the "Test Zone". This zone is individually computed to be near 75 percent of the maximum heart rate of your User Profile. When you reach the Test Zone, the machine holds the Burn Rate steady for 3 minutes. This lets you reach a stable condition (where your heart rate becomes steady). At the end of the 3 minutes, the Console measures your heart rate and the power output. These numbers, along with information about your age and weight, are computed to produce a "Fitness Score".

Note: Fitness Test scores should only be compared to your previous scores and not to other User Profiles.

Compare your Fitness Scores to see your improvement.

SMART MAX Interval

The SMART MAX Interval program is the MAX Interval Workout Program with the Console shifting the resistance level for the User. To get the User into the Target Burn Rate Range, the Console will adjust the resistance level based on the current RPM.

During a workout, the Console attempts to coach the User into the selected Target Burn Rate range. If the User is above the Target Burn Rate, the Console will decrease the Resistance Level. If the User is below the Target Burn Rate, the Console will increase the Resistance Level.

The Time Intervals and Burn Rate levels can be customized.

To start a Workout Program:

1. Stand on the machine.
2. Push the PROGRAMS button until you select the desired Workout Program.
3. Push the START/ENTER button to begin the selected Workout Program.
4. When done with your workout, stop pedaling and push PAUSE/END to pause the workout. Push the PAUSE/END button again to end the workout.

Paused / Results Mode

To Pause a workout:

1. Stop pedaling and push the PAUSE/STOP button to pause your workout.
Note: The Console will automatically pause if there is no RPM signal for 5 seconds.
2. To continue your workout, push START/ENTER or start pedaling.

When paused, the Console display will show "WORKOUT PAUSED", and then flash the workout values.

If the workout does not resume or if the PAUSE/STOP button is pushed, the workout will display "WORKOUT COMPLETE", and the result values are displayed (Total Calories, Total Time, Average RPM, Average Heart Rate, Average Burn Rate, and Average Level). If the workout was a MAX Interval workout, the Console will also display the total "ACTIVE" interval time.

If there is no RPM for 5 minutes, the Console automatically goes to the Power-Up / Idle Mode.

Edit a User Profile

For a more accurate calorie count and Target Calorie Burn, a User Profile should be customized to the User.

1. Push USER button to select your User Profile (User 1 or User 2).
2. Push and hold the USER button for 3 seconds to begin the Edit User mode.
3. The Console will display the AGE prompt with the default age value ("32"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to set the value.
4. The Console will display the GENDER prompt with the default gender value ("FEMALE"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to set the value.
5. The Console will display the UNITS prompt with the default units value ("LBS"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to set the value.
6. The Console will display the WEIGHT prompt with the default weight value ("160"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to set the value.
7. The Console will display the HEIGHT prompt with the default height value ("60 INCHES"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to set the value.
8. The Console will display the RESET SETTINGS prompt with the default value ("NO"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to accept the value. All Workout settings for the User will be reset to the default settings.
9. The Console will display the RESET USER prompt with the default value ("NO"). Use the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the value, and push START/ENTER to accept the value. All Workout results and settings for the User will be erased with a reset.
10. The User Profile review is complete, and the Console will display the WELCOME screen.

On the initial edit of each User Profile, all screens must be reviewed and accepted. After the initial edit, a User can adjust a value, set it, and push PAUSE/STOP to exit the Edit User mode.

Customize the MAX (and SMART MAX) Interval Program

The interval times and burn rate levels can be adjusted on the MAX Interval Program. The adjusted values will be set as the default settings for future workouts.

1. Step up to the machine.
2. Push and hold down the MAX Interval button for 3 seconds.
3. The Console will display the "ACTIVE" interval time, flashing. The ACTIVE segments in the Profile display will also be flashing. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the "ACTIVE" interval time.

Note: Intervals are limited to a maximum of 10:00 for each type ("ACTIVE" or "REST"), and the entire workout is limited to a maximum of 99:04 minutes.

4. Push the START/ENTER button to set the displayed value.
5. The Console will display the "ACTIVE" Burn Rate adjusted to the User settings, flashing. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the "ACTIVE" Burn Rate level.
6. Push the START/ENTER button to set the displayed value.
7. The "REST" interval time is now displayed, flashing, along with the other segments on the Profile display. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the "REST" interval time.
8. Push the START/ENTER button to set the displayed value.
9. The Console will display the "REST" Burn Rate adjusted to the User settings, flashing. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the "REST" Burn Rate level.
10. Push the START/ENTER button to set the displayed value.

Note: This procedure also works with the SMART MAX Interval Program. The Workout defaults can be reset in the User Profile settings.

Customize the Workout Goals

The workout goals (time and calories) for the Standard and Calorie Goal Workouts can be adjusted. Once changed, the new values will be the default for future workouts.

1. Step up to the machine.
2. Push the PROGRAMS button until the desired Program is selected.
3. Push and hold down the PROGRAMS button for 3 seconds.
4. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to adjust the displayed value.

Default values:

Calorie Burn, Fat Burn, and Stairs:	16 minutes
Calorie Goal:	300 calories

5. Push START/ENTER to set the displayed value.
6. The Console will display the selected Program with the adjusted Total Time or Calorie value.

Note: The Workout defaults can be reset from the User Profile settings.

Console Setup Mode

The Console Setup Mode lets you control the sound settings, or see maintenance statistics (Total Run Hours and Software Version).

1. Push and hold down the Burn Rate/Increase and PAUSE/END buttons for 3 seconds while in the Power-Up Mode to go into the Console Setup Mode.

Note: Push PAUSE/END to exit the Console Setup Mode and return to the Power-Up Mode screen.

2. The Console display shows the Sound Settings prompt with the current setting. Push the Burn Rate/Increase or Burn Rate/Decrease buttons to change between the settings of "OFF" and "1" through "7". A setting of 7 is the loudest sound level
3. Push START/ENTER to set.
4. The Console display shows the TOTAL RUN HOURS for the machine.
5. For the next prompt, push the START/ENTER button.
6. The Console display shows the Software Version prompt.
7. Push the START/ENTER button to exit the Console Setup Mode..

The Console will display the Power-Up Mode screen.

Read all maintenance instructions fully before you start any repair work. In some conditions, an assistant is required to do the necessary tasks.

! Equipment must be regularly examined for damage and repairs. The owner is responsible to make sure that regular maintenance is done. Worn or damaged components must be repaired or replaced immediately. Only manufacturer supplied components can be used to maintain and repair the equipment.

If at any time the Warning labels become loose, unreadable or dislodged, contact your local distributor for replacement labels.

DANGER To reduce the risk of electrical shock or usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

Daily: Before each use, examine the exercise machine for loose, broken, damaged, or worn parts. Do not use if found in this condition. Repair or replace all parts at the first sign of wear or damage. After each workout, use a damp cloth to wipe your machine and Console free of sweat.

Note: Avoid excessive moisture on the Console.

Weekly: Check for smooth roller operation. Wipe the machine to remove dust, dirt, or grime. Clean the rails and surface of the rollers with a damp cloth.

Note: Do not use petroleum based products.

Monthly or after 20 hours: Make sure all bolts and screws are tight. Tighten as necessary.

NOTICE: Do not clean with a petroleum based solvent or an automotive cleaner. Be sure to keep the Console free of moisture.

Replace Batteries in Chest Strap

The heart rate (HR) chest strap uses a CR2032 battery.

! Do not perform this procedure outdoors or in moist or wet locations.

1. Using a coin, loosen the slotted cover on the battery bay. Remove the cover and battery.
2. When replacing the battery, insert it in the battery bay with the + symbol facing up.
Note: The chest strap uses CR2032 size batteries.
3. Reinstall the cover on the strap.
4. Discard the old battery. Dispose of in accordance with local regulations and/or at approved recycling centers.
5. Inspect your chest strap to ensure function.

! Do not use until the equipment has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.

Troubleshooting

Condition/Problem	Things to Check	Solution
No display/partial display/unit will not turn on	Check electrical (wall) outlet	Make sure unit is plugged into a functioning wall outlet.
	Check connection at front of unit	Connection should be secure and undamaged. Replace adapter or connection at unit if either are damaged.
	Check data cable connections/orientation	Be sure cable is connected securely and oriented properly. Small latch on connector should line up and snap into place.
	Check data cable integrity	All wires in cable should be intact. If any are visibly crimped or cut, replace cable.
	Check console display for damage	Check for visual sign that console display is cracked or otherwise damaged. Replace Console if damaged.
	AC Adapter	Check for visual sign that AC Adapter is cracked or otherwise damaged. Replace AC Adapter if damaged.
	Console Display	If Console only has partial display and all connections are fine, replace the Console.
		If the above steps do not resolve the problem, contact your local distributor for further assistance.
No response on Console when button is pushed	Console Button Assembly	Try other buttons to get any response on the Console.
	Check data cable integrity from Console Button Assembly to Console	All wires in cable should be intact. If any are visibly crimped or cut, replace cable.
	Check data cable connections/orientation	Be sure cable is connected securely and oriented properly. Small latch on connector should line up and snap into place.
	Check console display for damage	Check for visual sign that console display is cracked or otherwise damaged. Replace Console if damaged.
	Check Console Button Assembly	Check for visual sign that the Console Button Assembly is otherwise damaged. Replace the Console Button Assembly if damaged.
		If the above steps do not resolve the problem, contact your local distributor for further assistance.
No speed/RPM reading	Check data cable integrity	All wires in cable should be intact. If any are cut or crimped, replace cable.
	Check data cable connections/orientation	Be sure cable is connected securely and oriented properly. Small latch on connector should line up and snap into place.
	Check magnet position (requires shroud removal)	Magnet should be in place on pulley.
	Check Speed Sensor (requires shroud removal)	Speed sensor should be aligned with magnet and connected to data cable. Realign sensor if necessary. Replace if there is any damage to the sensor or the connecting wire.
	Console Electronics	If tests reveal no other issues, contact your local distributor for further assistance.
Unit operates but Telemetric HR not displayed	Chest Strap	Strap should be "POLAR [®] " compatible and uncoded. Make sure strap is directly against skin and contact area is wet.
	Interference	Try moving unit away from sources of interference (TV, Microwave, etc).
	Replace Chest Strap	If interference is eliminated and HR does not function, replace strap.

Condition/Problem	Things to Check	Solution
Console shuts off (enters sleep mode) while in use	Check electrical (wall) outlet	Make sure unit is plugged into a functioning wall outlet.
	Check connection at front of unit	Connection should be secure and undamaged. Replace adapter or connection at unit if either are damaged.
	Check data cable integrity	All wires in the cable should be intact. If any are cut or crimped, replace cable.
	Check data cable connections/orientation	Be sure cable is connected securely and oriented properly. Small latch on connector should line up and snap into place.
	Reset machine	Unplug unit from electrical outlet for 5 minutes. Reconnect to outlet.
	Check magnet position (requires shroud removal)	Magnet should be in place on pulley.
	Check Speed Sensor (requires shroud removal)	Speed sensor should be aligned with magnet and connected to data cable. Realign sensor if necessary. Replace if there is any damage to the sensor or the connecting wire.
Pedals will not move	Pedal locations	The Pedals may be "bottomed out". Safely grasp the Static Handlebars and apply your weight to the heel of the higher foot. While still grasping the Static Handlebar, lean back slightly applying more weight onto the heel. Once the Pedals begin to move, resume your intended workout.
Fan will not turn	Check for blockage of fan	Remove material from fan. Be sure not to move the Handlebars, Legs or Pedals.  Be aware that the Fan, Handlebars, Legs and Pedals are connected and when either of these parts move the other does as well. If necessary, detach the Shrouds to help with removal. Do not operate machine until Shrouds have been replaced.
Unit rocks/does not sit level	Check leveler adjustment	Adjust levelers until machine is level.
	Check surface under unit	Adjustment may not be able to compensate for extremely uneven surfaces. Move machine to level area.
Foot pedals loose/unit difficult to operate	Hardware	Tightly secure all hardware on the Pedal Arms and Handlebar Arms.
Rubbing sound outside of Shrouds during operation	Caps	Slightly loosen Caps on Crank Arms
Metallic rubbing sound from within Shrouds during operation	Brake bracket	Brake bracket needs to be aligned. Contact your local distributor for further assistance.
Machine seems to release Pedals for a moment during operation	Belt slip	Contact your local distributor for further assistance.

Workout results will not sync with Bluetooth® enabled device	Current console mode	Machine must be in Idle Mode to sync. Push the PAUSE/STOP button until the "WELCOME" screen is displayed.
	Total time of workout	A workout must be longer than 1 minute to be saved and posted by the Console.
	Fitness machine	Unplug unit from electrical outlet for 5 minutes. Reconnect to outlet.
	Bluetooth® enabled device	Consult your device to be sure that the Bluetooth® wireless feature has been enabled on it.
	Fitness App	Review Specifications of Fitness App and confirm your device is compatible.
		Contact your local distributor for further assistance.
	Sync fails	Review account and password for MyFitnessPal®
Workout results not posting to Bowflex Connect™	Fitness App on Bluetooth® enabled device	Workout results transfer from the machine to the App, and then post to the Bowflex Connect™ website. Review account and password for the Bowflex Connect™ website.
		Contact your local distributor for further assistance.
Workout results not posting from Bowflex Connect™ to MyFitnessPal® account	Sync accounts	From the Menu icon on the Bowflex Connect™ website, select the Sync to MyFitnessPal®.
	Sync fails	Review account and password for MyFitnessPal®.
		Contact your local distributor for further assistance.

Introduction and Overview

Welcome to the Bowflex™ Body Weight Loss Guide. This guide is designed to be used with your Bowflex® equipment and will help you:

- Lose weight and get lean
- Improve your health and wellness
- Increase your energy and vitality

 **Consult a physician before you start an exercise program or a new health and diet plan. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine's computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.**

By focusing on the main three elements of the Bowflex™ Body Weight Loss Guide- quality, balance, and consistency- you'll be able to reach and maintain your weight loss and fitness goals for the next six weeks and beyond.

- **Quality** – The emphasis of this plan is on eating more whole foods and getting the most nutrients from your calories as possible. Making the majority of your diet from foods that have a single ingredient (for example fruits, vegetables, fish, lean protein, eggs, beans, nuts, and whole grains) provides the vitamins, minerals, fiber, protein, and healthy fats your body needs.
- **Balance** – Each of the meals and snacks in this guide have a source of fiber or smart carbohydrate, protein, and healthy fat to keep your energy levels consistent throughout the day to fuel your workouts. By having this balance you'll feel fuller longer, which is critical to weight loss success.
- **Consistency** – Getting about the same number of calories each day is important for your metabolism and your mindset. If you overdo it one day, don't try to make up for it the next day by not eating or cutting your calories drastically. Get right back on track by following this guide!

Results & Expectations

Results will vary depending on your age, starting weight, and exercise level. By adhering to a diet and exercise routine, you may lose 1-3 lbs per week and experience increased energy levels.

5 Tips for Long-Term Success

1. **Keep a food log** including hunger levels and water intake. Free online food logs and mobile apps are available at www.myfitnesspal.com and www.loseit.com
2. **Weigh and/or take measurements weekly** – no more and no less. Weighing weekly rather than daily or every other day is best. You'll track your progress and keep yourself in check without getting discouraged if the scale doesn't move for a few days. And remember, weight is just a number and it's influenced by muscle gain as well as fat loss. Feeling how your clothes fit can often be a better indicator of progress as your body adapts to exercise and nutrition changes.
3. **Measure portions** – To avoid portion creep, use measuring cups and spoons for grains (rice, pasta, cereal), beans, nuts, oils, and dairy. Use the Portion Sizes Guide for other foods.
4. **Plan ahead** – Make a meal plan for the week or log your food a day in advance. Planning sets you up for success, especially for social events and eating out.
5. **Practice your desired long-term habits** – It's easy to justify poor eating choices when you're only focused on the short term. Focus on the long term satisfaction of a slimmer, healthier you rather than the temporary gratification you'll get from splurging.

How to Use this Guide

- **Eat breakfast within 90 minutes of waking up and balance your meals and snacks throughout the day**
 - Don't go longer than 5-6 hours without eating
 - If you're not used to eating breakfast, start out small with a piece of fruit and have something else 1-2 hours later. Your body adapts to not eating breakfast, but as soon as you start eating early in the day and cutting back on dinner portions you'll notice your hunger will increase. This is a good sign your metabolism is working!
- **Mix and match meal options**
 - Select 1 option from the appropriate meal plan (male or female) for breakfast, lunch, and dinner, paying close attention to portion sizes
 - Select 1-2 snack options per day
 - You have the option to substitute one snack for one treat under 150 calories
 - Use the meal plan, sample options, and grocery list to create your own meals for more variety

- You can swap out any type of protein, vegetables or smart carbs for the suggested meal options. For example:
 - Turkey for tuna
 - Any fish or seafood for chicken
 - Cooked vegetables instead of salad
- Eat your calories
 - Cut out high calorie beverages like soda, juices, coffee drinks, and alcohol
 - Stick with water, unsweetened tea, and coffee. Aim for a minimum of 1.9 liters (64oz) of water per day to stay well hydrated
- If you're still hungry after or in between meals:
 - Have a glass of water and wait 15-20 minutes. Many times we mistake thirst (or even boredom!) for hunger. Wait out the initial urge to eat and sometimes it will pass.
 - If you're still hungry after waiting 15-20 minutes have a snack or mini-meal with fruit, vegetables, and protein.

If your goal is muscle gain or strength:

- Use the same meal plan but increase portion sizes in the same ratios to increase the total number of calories you eat every day. For example, increase portion sizes of protein and smart carbs at meals by 50%. Adding a snack is another option to meet your body's increased calorie needs in order to gain muscle and strength.
- Focus on post-workout nutrition by having one of your snacks within 30 minutes after you complete your workout. Make sure to have a combination of carbohydrates such as fruit with protein (yogurt, milk, or protein powder) to promote muscle growth and recovery. Chocolate milk is also a great option.

Meal Plan Overview

The female meal plan provides about 1400 calories, and the male plan provides about 1600 calories, of high quality nutrition to not only help you lose weight and feel great but get the most out of your calories. The vitamins, minerals, and antioxidants from eating mostly whole foods help support optimal health. These calorie levels will result in healthy weight loss for the majority of people. Keep in mind that everyone's metabolism is very different depending on age, height, weight, activity level, and genetics. Pay close attention to your weight, hunger levels, and energy and adjust your calories if needed.

Follow these guidelines if you're over 55:

- If you're over 55, you need fewer calories because your metabolism slows as you age. Stick with three meals with one optional snack per day.

Follow these guidelines if you're under 25:

- If you're under 25 you may need more calories. Add another snack if you feel low on energy or are extremely hungry.

Breakfast

Breakfast includes a smart carb, fruit, and a source of protein, which will also have fat. With a balance of carbohydrates and fiber from the smart carb and fruit combined with protein and fat, you'll energize your day and help control hunger levels throughout the day.

Snacks

Each snack is a balance of carbohydrates and protein to keep your blood sugar more consistent, which means you won't experience hunger and energy level spikes and drops.

This happens when you have a high carb-only snack like chips, candy, soda, crackers, or pretzels.

Lunch and Dinner

Lunch combines filling fiber from vegetables and smart carbs with a lean, or low-fat, protein. The healthy fat can come either from the protein added during cooking (nuts on a salad) or as a dressing or sauce (such as oil and vinegar salad dressing).

Here's an overview of what an ideal day looks like:
(See Portion Size Guide for proper serving sizes)

Breakfast

Snack #1

Lunch

Snack #2

Dinner

Breakfast Options	Fruit	Smart Carb	Protein/Fat
Fruit and Nut Oatmeal Cook plain oats in water. Top with fruit, nuts, milk, cinnamon, and honey.	Berries or banana	Plain oats (Regular or quick-cook)	Nuts and milk
Egg Muffin Cook egg/s. Toast bread and top with 1 slice of cheese, 1 slice of ham, and tomato.	Tomato	English muffin or sandwich thin	Egg, ham, and cheese
Yogurt Power Parfait Top yogurt with fruit. Sprinkle with 1 serving of nuts, 10-15ml (2-3 tbsp) wheat germ, or ground flaxseed, 15ml (1 tbsp) oats, and cinnamon.	Chopped fruit of your choice	Oats, wheat germ, and ground flaxseed	Plain non-fat Greek yogurt and nuts
On the Go PB & Apple Sandwich Toast bread. Spread on peanut butter, thin slices of ½ an apple, and 5ml (1 teaspoon) of honey.	Sliced apple	Sandwich thin, bread, or bagel thin	Peanut butter

Lunch & Dinner Options	Lean Protein	Smart Carb	Veggies
Pork Loin, Sweet Potato & Green Beans	Grilled or baked pork loin	Baked Sweet Potato	Green Beans
Chicken Stir Fry Flavor with 30ml(2 tbsp) teriyaki sauce	Chicken breast or boneless skinless thigh	Brown or wild rice	Mixed stir fry vegetables (fresh or frozen)
Steak Tacos with Side Salad (3 for males, 2 for females) Top with salsa, coriander, and sprinkle of shredded cheese	Sirloin steak	Corn tortillas	Salad
Whole Wheat Pasta with Shrimp or White Beans & Marinara Sauce	Shrimp (frozen or fresh) or cannellini beans	Whole wheat pasta	Steamed broccoli
Bunless Burgers with Oven Fries, Corn, & Salad Grill burgers. Bake sliced potatoes on sprayed cookie sheet for 25-30 minutes @ 218°C (425°F).	93% lean ground beef or turkey	Oven baked fries	Corn on the cob + side salad
Tuna & Avocado Wrap with Vegetable Soup Use 85g (3oz) of tuna (1 can). Top with lettuce, tomato, avocado, and mustard.	Tuna	High-fiber wrap	Vegetable soup (homemade or low-sodium canned)

Snack Options	
Smart Carb	Protein
1 medium apple	10-15 almonds
Baby carrots	30ml (2 tbsp) hummus
1 serving of crackers*	1 string cheese
Energy or protein bar with <200 calories*	

*See www.Bowflex.com/Resources for brand recommendations

Optional Treats

You have the choice of replacing Snack #2 with a 100-150 calorie treat. You can have an optional treat every day but for optimal health it is recommended to limit small splurges to 3-4 times per week. Use the approach that works best for you. Here are a few examples:

- 118ml (½ cup) lowfat ice cream
- 1 small bag of baked potato chips
- 118ml (4oz) of wine or 355ml (12oz) light beer
- 710ml (3 cups) of air-popped or light popcorn

Sample 3 Day Plan

Based on each of the meal options listed above, a typical 3 day plan could look like this:

	Day 1	Day 2	Day 3
Breakfast	Egg muffin	Power yogurt parfait	Fruit + nut oatmeal
Snack 1	Apple with almonds	Nut Thins® + string cheese	Baby carrots and hummus
Lunch	Tuna & avocado wrap with soup	Leftovers from dinner- day 1	Leftovers from dinner- day 2
Optional Snack 2 or Treat	118 ml (½ cup) ice cream bar	Energy bar	100 calorie bag of light popcorn
Dinner	Shrimp pasta	Chicken stir fry	Bunless burgers

Portion Size Guide

Each of the items listed are for one serving

MALE		FEMALE	
PROTEIN			
2 eggs 142g (5oz) chicken, fish, lean meat, or tofu 158ml (2/3 cup) beans or lentils* 237ml (1 cup) greek yogurt* 42.5g (1.5oz) cheese*		1 egg 85g (3oz) chicken, fish, or lean meat 118ml (1/2 cup) beans or lentils* 118ml (1/2 cup) greek yogurt* 42.5g (1.5oz) cheese*	
HEALTHY FAT			
30ml (2 tblspn) peanut or nut butter* 10ml (2 tspn) olive, flax, or walnut oil 59ml (1/4 cup) of nuts 1/3 medium avocado		15ml (1 tblspn) peanut or nut butter* 5ml (1 tspn) olive, flax or walnut oil 30ml (1/8 cup) or 30ml (2 tblspn) of nuts (approx.15 almonds) 1/4 medium avocado	
SMART CARB			
237ml (1 cup) cooked grains (59ml / 1/2 cup raw): oats, brown rice, quinoa, pasta 1 medium sweet or regular potato 2 corn tortillas 1 slice of bread (or 2 light slices equaling 120 calories or less) 1 english muffin, sandwich thin, or high-fiber wrap		118ml (1/2 cup) cooked (59ml / 1/4 cup raw) grains 1/2 medium sweet potato or regular potato 2 corn tortillas 1 slice of bread (or 2 light slices equaling 120 calories or less) 1 english muffin, sandwich thin, or high-fiber wrap	
FRUIT			
1 medium apple, orange, or pear 1 small banana (length of your hand) 237ml (1 cup) berries or chopped fruit 59ml (1/4 cup) dried fruit (fresh or frozen is optimal)			
Vegetables* You can have unlimited vegetables except for peas and corn; stick with 118ml (1/2 cup) serving			
473ml (2 cups) spinach or lettuce = 2 cupped hands 237ml (1 cup) raw vegetables 118ml (1/2 cup) cooked vegetables 177ml (6oz) low sodium vegetable juice			
OPTIONAL TREATS			
118ml (1/2 cup) lowfat ice cream 1 small bag of baked potato chips 28g (1oz) dark chocolate 118ml (4oz) of wine or 355ml (12oz) light beer 710ml (3 cups) air-popped or light popcorn			

* some foods are a combination of protein and carbs or protein and fat

237ml (1 cup) = baseball

118ml (1/2 cup) = lightbulb

30ml (2 tblspn)
= golf ball

59ml (1/4 cup) nuts
= Altoids tin

85g (3oz) chicken or meat
= deck of cards

1 medium potato
= computer mouse

1 medium piece of fruit =
tennis ball

28g (1oz) cheese
= 3 dice

Grocery List

BREAD & GRAINS		
100% whole wheat bread Sprouted grain breads Light or whole wheat english muffins Sandwich or bagel thins Corn or low-carb whole wheat tortillas High-fiber wraps Plain oats: 1 minute or old fashioned Whole grains: brown rice, bulgar, barley, quinoa, couscous		Tips: Look for 100% whole wheat as the first ingredient. Look for 4g of fiber per slice or 5g per 2 slices of light or diet bread. Aim for bread with less than 100 calories per slice.
DAIRY & DAIRY ALTERNATIVES		CRACKERS, SNACKS & ENERGY BARS
Plain non-fat greek yogurt Kefir (yogurt like drink) Organic low-fat milk Enriched almond or soy milk Cheese: feta, parmesan, mozzarella, light havarti, provolone, swiss, string cheese, or single serving packages		Any unsalted nuts or seeds Air-popped or light popcorn Edamame in the pod Energy bars Crackers Hummus
MEAT, FISH, POULTRY & PROTEIN Wild game Salmon, halibut, tuna, tilapia, shrimp, catfish, scallops, or crab Pork loin, pork chops, or pork roast Chicken or turkey breast or thighs (no skin) Eggs and 100% egg whites Lean beef: sirloin, chuck, round, tenderloin, 93% lean (organic and grass fed is best) Canned salmon or tuna (in water) Nitrate-free, reduced sodium ham, turkey, chicken, or roast beef lunch-meat Any type of bean, dry or canned low-sodium varieties Tofu and tempeh		Tips: Limit crackers, pretzels, and chips to 2-3 servings per week. Always pair with protein such as hummus, cheese, or nuts. Look for energy bars with less than 200 calories and 20g of sugar and at least 3g of protein and 3g of fiber. Look for crackers with less than 130 calories and 4g or less of fat per serving.
FROZEN FOODS All vegetables without sauce All fruit Grains and grain medleys		FATS & OILS Avocado Olive, grapeseed, walnut, sesame, or flaxseed oil Butter/spreads: look for products free of trans fats and partially hydrogenated oils on the ingredient list.
Tips: Look for "Choice" or "Select" cuts of meat rather than "Prime". Prime cuts are fattier. Limit intake of highly processed meat and imitation meat products like sausage, bacon, pepperoni, and hot dogs to once a week or less.		DRESSINGS, CONDIMENTS & SAUCES Vinegars: rice, wine, balsamic All fresh or dried herbs and spices Mustard Salsa and chili sauce Marinara sauce with no high-fructose corn syrup Lemon and lime juice Bottled minced garlic and ginger Low-sodium soy sauce
		Tips: Light olive oil refers to the flavor, not the calorie content. Always measure oil and butter. Even if a fat is considered healthy, it's still very high in calories and portions need to be controlled.
		Tips: Look for products free of MSG, added colors, and high fructose corn syrup. Look for sauces under 50 calories per serving. Avoid cream based sauces and dressings like ranch, bleu cheese, and alfredo.

All fruits and vegetables, fresh and frozen, are great choices. Since every meal has one or both, your shopping cart should reflect this.

Keep It Going

Tips for continued weight loss and maintaining changes

- **Keep weighing yourself weekly**, even after you've reached your goal weight
- **Continue keeping a food log**. If you have your meal plan well-established, log your food every other week to keep yourself on track. Don't feel like you have to do it every day.
- **Prepare for plateaus**. The scale might not budge for a few weeks or even months after some initial weight loss. This is normal and to be expected. It's the body's natural process for adjusting to your new lower weight. Stay focused on your long-term goal, celebrate your successes and changes, and mix up your workouts to help overcome the plateau.
- **Calorie adjustments for maintaining weight loss**. Once you've reached your goal weight, you can increase your calories 100-200 per day as long as your activity level stays the same
- **Treat yourself**. Have a non-food reward for each goal you hit such as a massage, a new outfit, or an outing with friends and family
- **Use the resources below** to find new recipes, get expert advice, and support to stay motivated
